G'day Andrew

Thank you for making contact with me on this issue.

As discussed in our phone conversation on Wednesday, i have worked at the gated community (Cyprus) in Byron Bay on a number of different occasions, maintaining all their tree's. The majority of the work are on Cyprus Pines (Coastal Callitris Pine) due the high number growing on the property. I would say that 85% of the tree population on the property would be Cyprus Pine.

In my experience working at Cyprus, i have not come across any adverse reactions from the Coastal Callitris Pine growing adjacent to the load cell construction to the best of my knowledge. as explained in our phone conversation, i am a qualified Certificate 3 arborist, so i can not give a tree report that would be of any merit. that said i do have an understanding of tree structure and how they react in different environments. In the case of the load cell construction affecting the Cyprus Pines, i would say that it would have little to no affect to the best of my knowledge.

If you require a second independent tree report, from a well educated certificate 5 consulting arborist i would highly recommend Kasha Annesley. He is based in Lismore and would be of great assistance in your situation. I will Cc Kasha in on this email for future reference if he is needed.

Contacted details

Kasha Annesley

Nick

Thanks for your time today, as discussed we are looking at doing some works at one of our Holiday parks in Brunswick Heads.

The works are proposed to include the installation of turf load cells, similar to Econogrid40, around a number of Coastal Callitris Pine (CCP) Trees

<https://www.grassreinforcement.com.au/econogrid-40/>

There are two applications for the Econogrid40 (Grass or Gravel) we would propose a grass surface finish.

We understand that you have worked with a similar installation at your Cypress site on Broken Head Road

The community has raised some concerns surrounding the sensitivity of these systems being installed around these trees and have requested we seek other examples and references of similar

installations.

It would be greatly appreciated if you could provide a summary of your experience with the CCP trees on the site at Cypress and how they have responded to the installation (and co-existence) of load cells

I've attached some perspectives of what we're trying to do on the site, it won't offer much for you in terms of load cells however it shows what we're working towards.

I've also attached some photos I received from Paul from Cypress for context

Should you wish to discuss please do not hesitate to contact me directly.
