

General Notes

1. The height and size of the protection works has been defined based on consultation with the project stakeholders and do not provide a long term protection.
2. Same rock material to be used for protection works within the gully and beach side escarpment
3. Natural surface contours are computer interpolated from surveyors electronic field data.
4. Notwithstanding the limits of earthworks shown on the drawings, the actual limits shall be confirmed on site by the contractor.
5. Prior to commencement of construction, the contractor is to ascertain the location and level of existing services to his satisfaction.
6. Notwithstanding the extent of the works shown on the drawings the contractor shall undertake all necessary construction required to enable finished works to comply with the intent of the drawings and the requirements of the local authorities design and construction codes.
7. These drawings are diagrammatic only. They do not relieve the contractor or builder from his responsibility to comply with these requirements, even if drawings are approved by the authority.

Rock Armouring Notes

1. The surface should be completely cleared of vegetation before sand filling and placement of rock protection works
2. Geotextile layer to completely cover the interface between the rocks and sand
3. The cobbles forming the D200mm armouring shall be at least 20kg with a medium weight of 35kg and specific weight of not less than 2600 kg/m3
4. Large rocks shall be bedded on their broadest base.
5. The rock armouring has been intended for erosion protection, not for surcharge loading.

Protection Works at Midden

1. No excavation allowed at escarpment surface
2. No access to the site through the midden area is allowed
3. The extent of protection works may be changed by the superintendent at the site
